From Concept to Reality: The Dynapac XD25 110C will be the New Standard on the Road

Flensburg, Germany – **On a late summer day at a highway construction site in northern Germany, the KEMNA team is preparing for operation. However, today marks a special occasion: the new Dynapac XD25 110C, flagship of the Highway Class Paver series, is operating on-site for the very first time.**

The impressive machine, with its red and black design, instantly draws attention – but it's the performance that matters now. The model represents Dynapac's vision for the future of road construction: *"Paving the future."*

The KEMNA management team is already convinced by the concept and features. The XD25 was developed in close cooperation with them. This machine was Now it's time to see whether the claim *"Built for the new generation operator"* holds true in daily use.

Operators test the new interface. While unfamiliar at first, it quickly proves to be clear and easy to use. *"You get used to it quickly,"* one operator remarks. *"The machine is quiet, visibility is excellent, and operator comfort is high."*

Initial feedback from the team is positive: intuitive handling, quick adaptability, high build quality, and smooth working experience. The operating concept, with controls integrated directly into the swiveling seat, was also very well received.

At the end of the day, everyone agrees: The new generation of machines is ready – and now in active use.

KEMNA BAU Andreae GmbH & Co. KG

KEMNA BAU Andreae GmbH & Co. KG is a German corporate group operating in the construction, building materials, and raw materials industries, headquartered in Pinneberg near Hamburg. The company is active in the sectors of road construction, asphalt production, and the extraction of crushed and uncrushed aggregates. It ranks among the 30 largest construction companies and most efficient asphalt producers in Germany.

As a modern company with a long-standing tradition, the KEMNA Group employs around 2,200 people at more than 70 locations across northern and central Germany. Its operations include quarries and gravel pits, asphalt mixing plants, and construction sites, as well as subsidiaries specializing in the transport of bulk materials by road and rail.

In the field of road construction, KEMNA carries out all types of construction projects related to federal motorways, secondary roads, and urban traffic routes. The company is also active in the construction of airfield surfaces and rail infrastructure for long-distance, regional, and urban transport. For the structural maintenance of civil engineering works, KEMNA offers comprehensive solution concepts. In addition to earthworks associated with road construction, the company's core competencies also include dike and landfill construction.
